

ESHAAN GULIANI

(AI GENERALIST)

Specializing in LLMs and Deep Learning

[LinkedIn: www.linkedin.com/in/eshaan-guliani-b14489344](https://www.linkedin.com/in/eshaan-guliani-b14489344)

[GitHub: github.com/eshaan-eshaan](https://github.com/eshaan-eshaan)

TECHNICAL SKILLS

- **AI/ML:** Deep Learning (CNNs, Transfer Learning) | LLM Applications (RAG, CAG, NLP, Supervised Learning Prompt Engineering) | Model Training & Optimization | TensorFlow, Keras, PyTorch | Google Colab
- **Full-Stack Development:** React.js, Node.js, Three.js etc. | Python (Flask, FastAPI) | RESTful API Design | Database Design (MySQL, Firebase), Android Studio
- **Deployment & Infrastructure:** Cloud Platforms (Render, Vercel) | Production Deployment | System Architecture | Performance Optimization | 99.2% Uptime Management
- **AI Product Thinking:** End-to-End System Design | Model-to-Production Workflows | Business Impact Analysis | Technical Documentation | N8N Automation

PROFESSIONAL PROFILE

 eshaan1311@gmail.com

OBJECTIVE

My goal is to become an aspiring AI generalist with hands-on experience in developing end-to-end intelligent systems, from model design to deployment. I am skilled in deep learning, LLM applications and full-stack integration. My focus is on building scalable, production-ready solutions and passionate to apply AI in solving real-world problems across various domains.

EDUCATION

Bachelor of Technology (B.Tech.)	2024-2028
<i>Artificial Intelligence & Machine Learning</i>	Pursuing
Manav Rachna University, Faridabad, Haryana	
Higher Secondary Examination	2024
<i>Non-Medical Stream</i>	
Grand Columbus International School, Faridabad, Haryana	
Secondary Examination	2022
<i>Science Stream, First Division with Distinction</i>	
Grand Columbus International School, Faridabad, Haryana	

PROJECTS

LLM Hallucination Detection System | Chrome Extension

March 2026 | Tech Stack: Python, LLMs, NLP, Chrome Extension APIs, FastAPI, React

- Built end-to-end hallucination detection system for LLM responses, spanning model research, API design, frontend development, and browser extension deployment
- Demonstrates model capabilities: Model selection → System architecture → API development → Frontend integration → Production deployment

Shield Screen | Mobile App

March 2026 | Tech Stack: Kotlin, API-26

- An Android-based privacy system that fuses device sensors and on-device risk scoring to dynamically mask the display
- Mitigating shoulder-surfing attacks in public environments without requiring specialized hardware or external connectivity.

Deepfake Detection System | Computer Vision & Deep Learning

March 2026 | Tech Stack: Python, TensorFlow, Keras, CNNs, Google Colab, OpenCV

- Designed and trained CNN-based deepfake detection model achieving 86% accuracy on manipulated video content
- Built complete ML pipeline: Data preprocessing → Feature engineering → Model architecture design → Training optimization → Hyperparameter tuning

VoteSphere - Secure Voting System | Full-Stack Development (<https://votesphere-eshaan-guliani.onrender.com/>)

February 2025 | Tech Stack: React.js, Node.js, Express.js, MySQL, RESTful APIs, Render

- Designed RESTful API architected and deployed a full-stack secure voting platform with end-to-end encryption and real-time vote tracking
- Built responsive React frontend with an intuitive UI/UX for both voters and administrators, deployed on cloud platform (Render) with MySQL database integration and load balancing

Neuronix - Multilingual AI Chatbot Platform | Founder & Technical Lead

January 2025 | Tech Stack: AI/ML, NLP, Multilingual Processing, Voice Recognition, Cloud

- Founded a customizable multilingual AI chatbot platform targeting Indian market (Hindi, Tamil, Marathi, etc.)
- Led end-to-end product development: Market research → Technical architecture → MVP development → Go-to-market strategy
